Kaysun Corporation receives MedAccred accreditation

[Kaysun Corporation](#) (Manitowoc, Wis.) has received its MedAccred Plastics accreditation. Kaysun is one of only a few injection molders in the United States that holds this certification.

[MedAccred](#), an industry-managed supply chain oversight program managed by the Performance Review Institute, is focused on reducing risk to patient safety. For injection molders producing resin-based medical components and devices, MedAccred audits are administered by vetted subject matter experts who apply specific criteria to injection molding, insert molding, overmolding, injection blow molding, transfer molding, and compression molding processes. This enables a robust assessment of a molder's ability to consistently manufacture medical components and devices that conform to the applicable technical specifications, industry standards, and manufacturer requirements.

“Holding the MedAccred accreditation puts Kaysun in an elite group of injection molders that can capably and confidently serve the medical industry,” said Al Timm, Kaysun Senior Business Development Engineer. “Medical OEMs understand the weight MedAccred carries in medical device quality and compliance. The accreditation is an endorsement of Kaysun’s ongoing commitment to excellence and of how our approach to truly partnering with medical OEMs results in consistent, value-added outcomes.”
